This Project has been funded by a grant from the New York State Environmental Protection Fund through the Hudson River Estuary Program of the New York State Department of Environmental Conservation.

Habitats were identified through map analysis and aerial photograph interpretation. Habitats were digitized onscreen, using ArcGIS 10.0 software, over orthophoto images taken in spring 2009 obtained from the New York State GIS Clearinghouse. The report prepared in conjunction with these maps (Sisson, 2014) explains the habitat identification and mapping methods, describes the ecological significance of each habitat type, and offers conservation recommendations.
